Education

Bachelor's Degree at **KPR Institute of Engineering and Technology** 2023–2027 (7.5/10)
Class 12th from **Sri Vijay Vidyashram Senior Secondary School (CBSE)** 2022–2023 (319/500)
Class 10th from **Sri Vijay Vidyashram Senior Secondary School (CBSE)** 2020–2021 (392/500)

Work Experience

Software Developer Intern @ Zettaone Technologies July 2025 (1 month)
Developed **Climora**, a React Native weather and soil insights app, integrating location-based APIs for real-time forecasting and agricultural support.
Built a **QR & Barcode Scanner with OCR** using Flask backend, React Native frontend, and Easy-OCR, enabling accurate text extraction and reducing manual data entry.
Designed and trained an **AI model for PCB component detection**, applying computer vision techniques to identify misaligned parts with higher accuracy.

Projects

Periodontal Disease Prediction
Developed a CNN-based deep learning model on panoramic dental images for periodontal disease prediction, leveraging K-Fold cross-validation to improve reliability and support early diagnosis.
AI Disease Detector
Built an XGBoost-based disease prediction system with a Streamlit interface, enabling real-time symptom-based diagnosis using encoded clinical data and robust evaluation for high accuracy.
CLIMORA
Developed Climora, a React Native app providing real-time weather and soil insights through geolocation-based APIs and custom search functionality.
VISYRE
Built a mobile app with React Native and Flask to decode QR/barcodes and extract text via EasyOCR, streamlining data capture and reducing manual entry.

Research Work

Early Detection of Periodontal Disease Using Deep Learning (Ongoing)
Developing a CNN-based deep learning model with K-Fold validation for periodontal disease classification from panoramic dental images, supporting early diagnosis and treatment planning.

Symptom-Based Disease Prediction Using Machine Learning (Ongoing)
Designing an XGBoost-based disease prediction model with a Streamlit interface for real-time symptom-based diagnosis, improving accessibility to preliminary health insights.

Skills

Programming Languages	Python, Java, JavaScript
Frameworks & Libraries	Flask, Scikit-learn, OpenCV, YOLO, TensorFlow, PyTorch
Databases	MySQL, MongoDB
Tools & Platforms	Git, Streamlit,React, VS Code
